It's easy to search Wikibooks by topic, and there are separate sections for recipes and childrens' texbooks. You can download any page as a PDF using a link provided in the left-hand menu, but unfortunately there's no support for other formats. There's also Collection Creator – a handy tool that lets you collate several pages, organize them, and export them together (again, in PDF format). It's a nice feature that enables you to customize your reading material, but it's a bit of a hassle, and is really designed for readers who want printouts. The easiest way to read Wikibooks is simply to open them in your web browser.

### Combustible Gas Detector Sensor Drift

Combustible gas detector sensor drift: Catalytic vs. infrared By Kelly Rollick, Allan Roczko, and Leslie Mitchell. Catalytic bead combustible sensor technology, used for decades to measure combustible gas concentrations, dates back to the 1830s. The infrared spectrum was discovered in 1800.

arrestor, providing the added advantage of improved gas response. The close coupling of the electronics to the IR sensor does however limit its high temperature operation. Exceeding the operational temperature limit can cause IR sensor drift or failure.

As the detector element encounters combustible gas, the temperature of the bead increases and the resistance increases accordingly. The difference in the resistance between the detector and the reference elements is the signal representing the concentration of gas.

How an LEL sensor works. There are a pair of resistive fine-wire elements that comprise a catalytic bead LEL sensor. One of them is a reference and the other is an LEL detector. When gas that is combustible is exposed to the detector, the bead's temperature is raised. This causes the resistance to be increased.

If a combustible gas release is not ignited immediately, a vapor plume will form. This will drift and be dispersed by the ambient winds or natural ventilation. If the gas is ignited at this point, but does not explode (because of lack of confinement), it will result in a flash fire, in which the entire gas cloud burns very rapidly.
