Electric radiator  
cooling fans usually  
switch on when the  
engine coolant reaches  
a set teperature.

Automotive electric  
fans are also better in  
traffic because they

can switch on if your engine gets hot.

Engine mounted fans are less effective in traffic because they pull little air when the engine RPM is low. If engine to radiator clearance is a problem, some electric fans can be used as a pusher fan and placed on the grille side of the radiator.

The fan could continue running indefinitely even if the engine has stopped and the engine compartment temperature is high.

You could be hit by the fan and seriously injured. Do not remove either cooling system cap when the engine and radiator are hot: When the engine and radiator are hot, scalding coolant and steam may shoot out

# Download Free Engine

under pressure and cause serious injury. Open the hood ONLY after steam is no longer escaping from the engine: Steam from an overheated engine is dangerous.
