Onan Engine

Troubleshooting

Check the fuel levels. If your Onan generator isn't running, it may be because fuel levels are too low. While some RV generators will run until the fuel tank has nothing but fumes, the Onan models tend to stop working when you're down to a quarter tank. The units that do this are the ones drawing from the

Locate the screw in the governor arm. Turn the screw until the engine is running as smoothly as possible at full load, then allow the engine to idle. The engine should idle down smoothly with no sputtering at any point. Make adjustments to this screw until the engine runs smoothly at full speed and at idle. references.

How to Adjust the Governor on an Onan Engine | Hunker

Turning the adjustment out too far can cause the regulator to allow fuel to flow through it even with the engine off. You do not want this. To check for a leak apply soapy water to the end of the hose coming off of the outlet of the regulator. If it creates a bubble the turn the adjustment in
