The Econometrics Of Panel Data

The aim of this volume is to provide a general overview of the econometrics of panel data, both from a theoretical and from an applied viewpoint. Since the pioneering papers by Edwin Kuh (1959), Yair Mundlak (1961), Irving Hoch (1962), and Pietro Balestra and Marc Nerlove (1966), the pooling of cross sections and time series data has become an increasingly popular way of quantifying economic relationships.

Abstract: This is an intermediate level,
Ph.D. course in the area of Applied
Econometrics dealing with Panel Data.
The range of topics covered in the
course will span a large part of
econometrics generally, though we are
particularly interested in those
techniques as they are adapted to the
analysis of 'panel' or 'longitudinal' data
sets.

Jakub Muck: Econometrics of Panel Data

In statistics and econometrics, panel data and longitudinal data are both multi-dimensional data involving measurements over time. Panel data is a subset of longitudinal data where observations are for the same subjects each time. Time series and cross-sectional data can be thought of as special cases of panel data that are in one dimension only (one panel member or individual for the former, one time point for the latter). A study that uses panel data is called a longitudinal study or panel stu

A Short Review on Panel Data Econometrics

In the disciplines of econometrics and statistics, panel data refers to multi-dimensional data that generally involves measurements over some period of time. As such, panel data consists of researcher's observations of numerous phenomena that were collected over several time periods for the same group of units or entities.

This book reviews some of the main topics in panel data econometrics. It analyses econometric models with non-exogenous explanatory variables, and the problem of distinguishing between dynamic responses and unobserved heterogeneity in panel data models. The book is divided into three parts. Part I deals with static models.
